CSCE190 Usability Testing Script: CCC

Scenario:

You are newly admitted college freshmen looking to organize your schedule and assignments. Your friends use the reminder app but it's not very helpful as you have to check six to eight websites a day checking what's due and when. You are getting burnout of having to check online so much so you check the App Store for a software app to get you organized.

Task 1: Navigate to the 'Assignments' tab and create 5 new assignments (1 for each class).

Task 2: From the home menu, find the office hours for any professor and then return to the home menu.

Task 3: Try to find out how to change the theme of the app and choose one of the three to your liking.

Notes:

To change: Bring up all available classes when creating a new assignment instead of having to go into the classes individually.
Add a new shortcut on the top of the screen that can redirect you back to the home screen from any tab.

To keep: All three current available app themes coordinate well.
Finding office hours for professors is easy to read and navigate.
